

Customer Onboarding Guide

We come to you. We do the heavy lifting. You go live in 3 to 6 weeks.

FLO onboarding is designed around one principle: **low friction for you, real expertise from us**. You will not be asked to spend weeks formatting spreadsheets or interpreting our requirements. We come to you, look at what you have, and do the work together. Your role is to share what you know and approve what we produce.

Your Seamless Onboarding is Collaborative:

#	PHASE	TIME	WHAT HAPPENS
1	Assessment & Kick-off	Week 1	HAC Texas walks through the 6 Pillars of CCC compliance with you. We document where you stand. Conversational, no homework.
2	Data Collection & Migration	~2 Weeks*	Send us your data however you have it. Excel, CSV, exports. We clean, deduplicate, migrate. You review and sign off. Billing API integration may add scope and effort. *Data quality may impact timeframe.
3	Setup & Configuration	Half Day	One joint working session. Notice templates, branding, compliance rules, and notification automation, all configured together.
4	Training	Half Day	Live admin and staff sessions. Ask Flo chatbot and short video library for ongoing reference. Tester companies get a self-service landing page and video tutorials.
5	UAT & Go-Live	3 Days	Test the live platform end-to-end. Verify data, notices, due dates. Sign off and we flip the switch.

The 6 Pillars of CCC Compliance

Phase 1 is built around the 6 pillars of a complete Cross-Connection Control program. We assess where you stand on each one so we can configure FLO around your reality, not a generic template.

P1 Legal Foundation

An up-to-date CCC ordinance is the legal basis for your entire program.

P2 Discovery

Every cross-connection hazard in your service area must be identified.

P3 Protection

Each location must have the correct BPA type for its hazard level.

P4 Testing

Regular testing per TCEQ regulations and city ordinance.

P5 Remediation

Failed tests must be corrected and verified with a passing retest.

P6 Inspection Continuity

CSI inspections close the loop and surface new hazards.

Getting Started with the Onboarding Portal

Track progress, schedule your assessment, send us your data, and see what happens next.

Before Your Kick-off, Have These Ready

- | | |
|--|--|
| ☐ A project lead and an IT contact from your team | ☐ Your preferred testing frequency model |
| ☐ Your current CCC ordinance (or equivalent) | ☐ Your utility logo and preferred email sender name |
| ☐ Whatever data you have on facilities, assemblies, testers, and test history | ☐ A target go-live date to plan against |

Sign In

Your Customer Success Manager (CSM) sends you an email with your project code.

Log in by using your **project code** and **email**. You land on your Journey tab.

Schedule Your 6-Pillar CCC Assessment

This is the most important step in onboarding. In Phase 1, click **Schedule My Session** and pick a date. HAC Texas joins you for a 1 to 2 hour walkthrough of the 6 pillars. We document where you stand and use it to configure FLO around your real situation. Prefer to look at it yourself first? A self-serve assessment tool is also linked from the same step.

Send Us Your Data (Phase 2)

You have **two equal options** (*Both paths work equally well. FLO does the migration either way*):

- Send what you have. Drop any files in the portal. Excel, CSV, exports from your old system, scanned documents, anything. We do the cleanup.
- Use our master template on the Journey tab. If you prefer structured data, download our 8-tab Excel template, fill it in, upload it back.

Once completed, we can set up your instance, train users, verify everything is ready to be switched on!

What makes FLO onboarding different

FLO comes to you, assesses your program against the 6 pillars, and does the migration work. We are built and run by the people who do this in the field every day in Texas. We meet you where you are and work together to reach compliance excellence.
